

I.R.I.S.

Intelligent Retrofit Installation System

I.R.I.S. allows you to retrofit your outdated Motor Control Center (MCC) and connect it to automation and process control systems via an installed CPwE network. An MCC retrofit conversion can make your outdated MCC as capable and reliable as a brand new MCC.

FEATURES:

- Allows for remote monitoring of critical assets via cellphone, tablet or laptop
- Utilizes high-performance ethernet cabling
- Creates flexibility in upgrading legacy MCCs one bucket at a time, as your budget allows

I.R.I.S. is a **very flexible** way for manufacturing facilities to upgrade equipment without having to shutdown entire portions of the plant floor.

I.R.I.S. allows companies to connect to their MCC equipment to monitor warning signs and set warning levels to **detect problems** before an MCC fails.

I.R.I.S. allows for IT equipment to be moved to a separate location that is more easily **accessible** to a company's IT team.

I.R.I.S. can save companies approximately **half the cost** of replacing an entire MCC.
